School: **Gen. E. Aguinaldo National High School –Bailen**

School Year: **2018-2019**

The study was conducted to determine the effects of experiences on conducting qualitative research to the self-achievement of selected Grade 12 students of GEANHS-Bailen in order to come up with recommended programs and activities in regard to learning Practical Research I. A total of 86 students were selected as the respondents of this study.

Quantitative method specifically, the descriptive type of research was used to analyze the effects of experiences on conducting qualitative research to the self-achievement of the selected students. It was also utilized to determine what improvisation can be made by the school in regards to learning the long-way process conducting research and making research paper.

The major tool used in data gathering was a validated researchers-made questionnaire which is divided into three parts. The statistical treatments used after data have been gathered are frequency and percentage, weighted mean, Pearson moment of correlation, z-test.

From the data gathered, the effects of experiences on conducting qualitative research revealed a positive impact to students' self-achievement. Alongside the primary data, the researchers also made secondary sources from literature and studies to support the results.
